

# Use-Case Flow Specification – Reserve Food Batch

Sunil S

PES1UG25CS848

**System:** Food Bank Surplus Redistribution Platform

**Use Case:** Reserve Food Batch

**Primary Actor:** Shelter Coordinator

## Preconditions

1. The Shelter Coordinator is a verified shelter user.
2. An active surplus food batch is available on the platform.
3. The food batch has not expired.

## Postconditions

1. The selected food batch is reserved for the shelter.
2. A pickup window is recorded for the reservation.
3. A pickup verification code is generated.

## Main Success Scenario

1. The Shelter Coordinator logs into the Food Bank Surplus Redistribution Platform.
2. The system displays available surplus food batches.
3. The Shelter Coordinator selects a suitable food batch.
4. The system displays the food batch details, including expiry information and dietary tags.
5. The Shelter Coordinator selects an available pickup window.
6. The system checks that the food batch is still available and has not expired.
7. The system confirms the reservation.
8. The system records the selected pickup window.
9. The system generates a pickup verification code.
10. The Shelter Coordinator receives the reservation confirmation and verification code.

## Alternate Flow

### A1. Food Batch Has Expired or Is No Longer Available

1. At Step 6, the system detects that the selected food batch has expired or has already been reserved.
2. The system does not create the reservation.
3. The system displays a message that the food batch is unavailable.

4. The Shelter Coordinator can select another available food batch.

## **End of Use Case**

The use case ends when the reservation is successfully confirmed or when the selected food batch is unavailable.
